

Keeping Your Cool Data Sheet

Use the spaces and table below to record the amount of materials you placed in the containers as well as the temperatures you take throughout the experiment. Be sure to be as specific as possible. Remember: try to touch the containers as little as possible in order to get accurate results. Picking up the containers too much can cause the temperature to rise due to the heat from your hands.

Amount of Sand in Container 1: _____

Amount of Water in Container 2: _____
